

Executive Decision Report & Capstone Presentation

Business Intelligence Analytics Portfolio | RabTech Academy

Executive Summary

- Revenue analyzed: ■25,837,984; profit: ■3,472,333; transactions: 10,000.
- Average Order Value: ■2,584; overall profit margin: 13.4%.
- Leading revenue category: Clothing; leading region: West.
- Priority actions: optimize discounting, scale high-performing segments, and establish KPI governance.

Methodology

- Data cleaning and preprocessing with Pandas.
- EDA using descriptive statistics, distributions, correlation analysis and business hypotheses.
- Interactive Streamlit/Plotly dashboard with category, region and date filters.
- Executive recommendations based on observed revenue and profitability patterns.

Revenue Drivers

- Clothing is the highest-revenue category.
- West is the highest-revenue region.
- Use category and regional performance to guide inventory, marketing and sales allocation.

Risk Areas

- Discounting may reduce unit economics if not controlled.
- Revenue concentration can create dependency on leading segments.
- Management should monitor margin alongside revenue rather than revenue alone.

Recommendation 1 — Discount Optimization

- Create category-specific discount guardrails.
- Use targeted promotions rather than blanket discounting.
- Review margin and AOV after every major campaign.

Recommendation 2 — Scale Winners

- Prioritize investment in Clothing.
- Use West as a benchmark and replicate successful practices.
- Reallocate resources monthly based on measured ROI.

Recommendation 3 — KPI Governance

- Make Revenue, Profit, Customers, AOV and Profit Margin the core executive scorecard.
- Assign KPI owners and conduct weekly reviews.
- Use dashboard drill-downs for rapid diagnosis.

Illustrative ROI

- A 3% revenue uplift would equal approximately ■775,140 incremental revenue.
- At the current margin, illustrative incremental profit would be about ■104,170.
- Figures are planning estimates and should be validated by Finance.

Implementation Timeline

- Weeks 1–2: KPI definitions and ownership.
- Weeks 3–4: dashboard deployment and baseline.
- Month 2: discount and segment optimization pilot.
- Month 3: impact review and scale-up.
- Quarterly: executive ROI and risk review.

Final Decision

- Adopt the dashboard as the primary management reporting layer.
- Focus on high-performing categories and regions.
- Introduce margin-aware discount controls.
- Run a 90-day pilot and measure against the current baseline.
